1.2.02

In re application of Bruce Wright

Serial No. 09/244,961

Filing Date: February 4, 1999

Attorney Docket No. NA-1147

Examiner: Alexander, L. Group Art Unit: 1743

For: "Comparator For Time-Temperature Indicator"

Commissioner of Patents and Trademarks

Attn: Box AMENDMENT Washington, D.C. 20231

REQUEST FOR RECONSIDERATION AND PETITION FOR EXTENSION OF TIME UNDER 37 C.F.R. 1.136(a)

Dear Sir:

In accordance with the provisions of 37 CFR 1.136(a) Applicant in the above-identified U.S. patent application respectfully petitions for an extension of time of three (3) months.

The time for responding to the Office Action dated December 18, 2001 was a three (3) month period expiring on March 18, 2002. The three (3) month extension of time extends the time set for response to June 18, 2002.

Please charge the fee set by 37 CFR 1.17(a) to the U.S. Army Materiel Command's Patent Office Deposit No. 19-2201 in the amount of \$920.00.

The Office Action dated December 18, 2001, has been carefully reviewed.

Comparisons in general and color comparisons in particular are well known. It is not obvious, however, just from this general knowledge that a person would determine that a comparator should or could be made or how to make it. What is obvious from the references is how to make a time-temperature indicator or integrator (TTI). From the TTI itself to obvious how to make a TTI Comparator.

Taoukis et al. mention both color change and color comparison. The color changes as described in Figures 1 and 2 of Taoukis et al. are related to the indicators classified as Critical Temperature Indicators (CTI) on p. 72. These color changes are rather rapid and Fesult in a Yes/No answer to a question such as, "Did it change"? With an indicator of this design,

temperature is a factor, but not time. The indicator (Type I) described in reference to Figure 3 has a scale, but this is not a color change. It is a movement of the dye advancing as a "blue front". Although the indicator (Type II) described in Figure 4 is continuous in principle, the response is discrete as indicated by the four possible readings on the scale. The responses from these types of indicators are different from a TTI as described on p. 72, paragraph 3, especially Type III as described on p.74. A TTI is continuous in response and changes more slowly so that a color comparison is possible with time being a factor. Color comparisons are mentioned in reference to Figures 4 and 9, but are in reference to the TTI itself and not to a comparator. Although the TTI in Figure 9 is of the type referred to in the present invention, the color comparisons in Figure 9 are again in reference to the TTI and not a TTI Comparator. The use of six stages in both this figure and in the patent application is a coincidence. In either case, the number of stages is not restricted to six and could have been smaller or greater in number. Many items including paperboard cartons have a similar appearance when viewed from the outside, but such outer appearance does not suggest that what is inside is the same or even similar. The patent application teaches a preferred embodiment and illustrates the type of TTI similar to that shown in Figure 9 of Taoukis et al. The closer the similarity is between a TTI and a comparator, the easier it is to use the TTI Comparator for measuring the TTI. If a different TTI were being measured, the TTI Comparator being used would look different.

Olsen et al. discuss color charts or wheels as TTIs, but do not teach or suggest a comparator or a separate technology that can be used apart from the TTI described as their invention. Olsen et al. including Figure 10 thereof, does not suggest a comparator, indicia, information corresponding to the indicia, and means for storing and accessing the information.

Applicant teaches a comparator and not a TTI. In view of Taoukis et al. and Olsen et al., it is not obvious how a separate and distinct comparator can be taught by the present invention.

In view of the foregoing remarks, it is believed that Claims 1 and 17 in this application are allowable and Notice to that effect is respectfully solicited.

Should the Examiner wish to contact Applicant's attorney regarding this application, the Examiner is respectfully invited to do so by calling or writing the undersigned in the Office of Counsel, U.S. Army Soldier and Biological Chemical Command, Natick, MA 01760 at (508) 233-4510.

Respectfully submitted,

NUNE 17, 200

Date

Vincent J. Ranucci

Attorney for Applicant
